Professional Summary

Database-focused Developer with 1+ year of experience working with SQL, PL/SQL, relational databases, backend systems, and data-driven applications. Hands-on knowledge of database development, SQL queries, stored procedures, database integration, troubleshooting, performance optimization, and API-driven data processing. Familiar with Oracle, MySQL, PostgreSQL, MongoDB, Linux/Unix, scripting, and cloud database services. Strong understanding of database design, data integrity, access control, monitoring, backup concepts, and production troubleshooting.

Technical Skills

Database Technologies: Oracle, MySQL, PostgreSQL, SQL Server, MongoDB

SQL / PL/SQL: SQL Queries, Joins, Subqueries, CTEs, Views, Stored Procedures, Functions, Triggers, Packages, Transactions, Constraints, Indexing

Database Administration: Backup & Recovery, Performance Monitoring, Query Optimization, Troubleshooting, Data Integrity, User/Role Management, Database Security, Maintenance

Performance: Execution Plans, Index Optimization, Query Tuning, Large Dataset Processing, Performance Troubleshooting

Cloud / Systems: Azure, Firebase, Supabase, Linux/Unix, Shell Scripting, REST APIs

Programming / Tools: Python, JavaScript, Node.js, Express.js, Git, GitHub, Postman

Areas of Interest: Cloud DBA, Database Administration, SQL Development, Database Performance, Data Engineering

Professional Experience

Excellence Technologies | Jr. Full-Stack Developer *15/04/2026 – Present*

- Work with relational and NoSQL databases for business applications, including database integration, SQL development, data validation, and backend data processing.
- Develop and optimize SQL queries, database operations, stored procedures, and API-driven data access for application requirements.
- Perform database troubleshooting by analyzing query behavior, data inconsistencies, API/database errors, and application-level database issues.
- Work with database authentication, users, roles, permissions, and access control while integrating Firebase and Supabase database services.
- Process and analyze database/API data using LLM and tool-based workflows to generate structured reports and business insights.
- Work with Linux/Unix environments and scripting concepts for application and database-related operational tasks.

Projects

Commercial Real Estate Marketplace | SQL, PostgreSQL, Node.js, REST APIs

- Developed a data-driven commercial real estate platform with backend APIs and database operations for property listings, users, and commercial real estate data.
- Designed database operations for property records, user profiles, search, filtering, and transactional application workflows.
- Integrated REST APIs with database queries and implemented validation, access control, and reliable data retrieval.
- Worked with database performance considerations including query optimization, indexing, filtering, and efficient retrieval of property data.

AntiqueXX – E-Commerce Auction Platform | MongoDB, Node.js, Express.js, REST APIs

- Developed database-driven auction functionality for antique items, users, bids, transactions, analytics, and application records using MongoDB.
- Implemented database operations and REST APIs for real-time bidding, user management, auction records, and transaction workflows.
- Applied role-based access control, authentication, data validation, and database security practices.

Study Notion | MongoDB, Node.js, Express.js, React

- Built a database-driven e-learning platform managing users, courses, instructors, course content, purchases, and student progress.
- Implemented backend APIs and database operations for authentication, authorization, course management, and payment workflows.
- Worked with structured application data, validation, access control, and efficient database retrieval for multiple user roles.

Video Analysis System | Python, OpenCV, YOLO, MediaPipe, Whisper, LLM

- Designed a modular data-processing pipeline for extracting, transforming, and storing video, audio, object-detection, pose, and transcription data.
- Processed large volumes of structured and semi-structured data using Python-based processing workflows and integrated multiple APIs/models.
- Generated structured analytical outputs from extracted video and audio data using LLM-based processing and database/API integrations.

Achievements

- Solved 200+ SQL and programming problems on LeetCode.
- Qualified IIT JAM with AIR 1306 in Mathematics.

Education

Maharana Pratap Engineering College, Kanpur, U.P. *08/2023 – 08/2025*
MCA

Lord Buddha P.G. College, Bahraich, U.P. *11/2018 – 05/2021*
B.Sc

Certificates: IBM Web Development, C++ Certificate from Code Help
